Project Requirements and Use Cases

Due: Friday, October 29, 1pm

To begin a project it is helpful to think about the requirements of your project and how it is going to be used. For this assignment, your team will draft a list of requirements, like you did for Design Homework 2 and create a Use Case diagram, like you did for Design Homework 3. After getting feedback and revision, these will end up in your SRS document.

You may want to revisit the previous design assignments for suggestions on how to do these.
